

# IASH<sup>®</sup>

*The International Association  
for Stability, Handling and Use  
of Liquid Fuels*

[www.iash.net](http://www.iash.net)

The **International Association for Stability, Handling and Use of Liquid Fuels (IASH)** was

formed in 1983 to be the world-leading association for technical exchange related to fuel quality assurance and R&D priorities.

**IASH** has held 17 conferences, attracting over 2600 experts from 35 countries, and published more than 800 technical papers and 200 technical posters.

### Benefits of Membership

- Opportunity to network with technical experts from across the full life-cycle of fuel production and use.
- Supporting Member Organizations eligible for Seat on IASH Board of Directors
- Access to IASH online Library, an invaluable scientific resource consisting of conference papers, presentations, and newsletters from 1983 to present.
- Opportunity to exhibit your expertise and products, and network with an international experts during conferences.

Both individual and corporate membership opportunities are available.

**IASH** is recognized throughout the world as the premier forum for liquid fuel technical discussions. IASH currently consists of over 230 members from 20 countries and our vision remains steadfast. IASH is actively supported by key global stakeholders in fuels technology from industry, government and academia.

The Association facilitates and encourages the exchange of scientific knowledge by promoting research and experimentation on the scientific and operational factors affecting the stability and handling of liquid fuels during their manufacture, blending, transportation, storage and use. Our members represent a cross-section of industry, government, and academia, many of whom are world-renowned technical experts in their field.

**IASH** has continued to keep pace with the evolution from conventional fuels derived from crude oil, to today's reality of conventional fuels, synthetic fuels and sustainable fuels containing or derived from renewable alternative sources, as well as performance enhancing and stability additives. The Association continually strives to meet the needs of the industry and of our members.

It is our goal to expand the knowledge base of our members and the field of liquid fuels in a wide range of topic areas, and challenge the boundaries of science and understanding in all aspects of liquid fuels, including the application of state of the art analytical technologies.

**Conferences** are held every two years at locations alternating between North America and Europe, encompassing a wide range of contemporary topics, including:

- Crude oil and refined products derived or processed from oil shale, tar sands, coal, natural gas, and renewable feedstocks
- Fuel additives
- Reformulated Fuels
- New technologies to characterize, test, and study fuels
- Fundamental chemistry of fuels and fuel additives
- Combustion, thermal stability, and storage stability
- Detection, characterization, and remediation of microbiological contamination
